

# Student Representative from the Institute of Innovation, Science and Sustainability

## Kushal Gohel | Master of Applied Cyber Security | Mt Helen

My name is Kushal and my journey at Federation actually started a few years ago when I started doing my Bachelor of Information Technology and clearly, I liked it enough. So here I am back again doing my Master of Applied Cyber Security.

I have spent quite a bit of time in the Institute of Science, Innovation and Sustainability. I have experienced the student life, how stressful it is, the good days, the bad days, and everything in between.

Like most of you, I have spent late nights working on assignments, dealing with group projects, trying to balance my work life, study life, and figuring out what my next steps will be after uni.

So, that's one of the main reasons I why I wanted to run for the Student Senate.

For me, being a good representative is pretty simple. Listening to students like you and me, seeing what our concerns are, what we are going through and making sure that is actually heard by the university.

I love working with people, bringing ideas together, listening to them throughout my studies as well.

I have worked in a lot of collaborations and shared ideas. I've got things to work better, whether it's in group studies or projects or discussions or even if it's just helping a classmate out.

So, if I am elected, I'll definitely make sure that students are actually being heard and supported in every way, like when it comes to career opportunities, even working in industry placements or whether just making sure what we are studying at uni is actually what will help us after graduation.

This uni has been a major part of my career and I would love to return back to this uni by representing the student community which I'm proudly a part of.
